## **Baby Leaf**

Seeds of head lettuce are grown at high density in the field. They are cut at baby, or immature, leaf stage in about half the time it takes to grow full-size head lettuce.

### **Mini Head**

Single-serving, compact heads are planted at higher density and mature earlier, allowing for faster turnaround time to market. A 10' section of a 4<sup>1</sup>/2' bed can produce 360 mini heads versus 40 fullsize heads.

#### **Full Head**

Traditional, full-size heads have larger frames, and require more space to grow. They mature later and produce larger volumes of lettuce per head than mini heads.

#### One-Cuts & Salanova®

Grow as full-size heads and, once harvested, easily cut with a knife or special cutting tool that separates the head into attractive, uniform leaves. Can be sold by the head or in pre-mixed bags which allows you more marketing options.

# **Lettuce Reference Chart**
